Monochromatic HDR Photography: Shooting And Processing Black & White High Dynamic Range Photos

Synopsis

Update: The Kindle version of Monochromatic HDR Photography: Shooting and Processing Black & White High Dynamic Range Photos currently available for sale has been corrected and updated to address formatting issues. Monochromatic HDR Photography is the first book intended to show photographers how to work at the intersection of two up-and-coming trends that are at the forefront of the digital revolution: Black & White and High Dynamic Range imaging. The book explains techniques for extending dynamic range, monochromatic conversion methods and best practices where the two technologies intersect. Since successful digital monochromatic image creation generally requires using the color information inherent in RAW exposures, most case studies will be presented in full color. In addition, Monochromatic HDR Photography provides extensive coverage of the creative vision required to successfully create monochromatic HDR images and the workflow necessary to make art prints from this specialized image making technique.

Customer Reviews

Images and details from Monochromatic HDR Photography, by Harold Davis Pyramide. Paris, France. I shot this image of the glass pyramid in the central court of the Louvre. As explained in my book, creating this image required shooting a bracketed sequence and using automated software to seamlessly blend the exposures. [Click here for a larger image.](#)
