## Customer Reviews

Double the size of the last volume I had. full of good charts and meds that to me only help me do a better job as a practitioner. I buy the lab coat version because I can't read the small print anymore in the pocket guides. Also books never run out of batteries or need a power source like an IPAD or computer.

In an age where the internet is at our fingertips and information is easy to obtain, I find that I turn to this book more frequently than I do the computer. It does not take long to look for a medication, they are divided in speciality or just look in the index. It may take the same amount of time to look for medication in this book, compared to turning on the computer but it is nice not having a sensory overload with all the information a internet search can present. A benefit of owning a book as there are many; is it may decrease the overall time you have to stare at a computer screen daily, never crashes or will not turn on/open because of technical difficulties, something to write on or use as a step stool when you need only 2 inches more to reach the medical supplies at the top of the supply closet

Lots of information in a pocket guide. I have been using the latest edition of this book for over 10 years. It is just as fast to retrieve information as with a smart phone app and the book has more information.

Normally a concise reference that I use very frequently but this edition has an index that has me thinking of looking for something else. I go to look up a drug and there are multiple pages listed with no indication which is the main entry and not a brief reference under another drug.

Its bigger than it should be, there's wasted space in the pages, the text is larger than it needs to be. Drug mechanisms aren't mentioned. Its really not lab jacket sized, maybe if you didn't have other books or paperwork you needed.

I've bought Pharmacopoeia books for years. First the smaller print one, but as I've aged, I needed the larger version. I sent this back - not because of the information, but because the manufacture has increased the size of the book and it's weight since my last purchase - which I think was two years ago. I know a lot of medications have come out since then, but I know rely on other sources for medication use.

I like it but it is def NOT pocket. This thing is way too big to carry around with you.

Happy with my purchase!
