Key Questions In Cardiac Surgery

Synopsis

Key Questions in Cardiac Surgery will systematically cover all the main topics involved in the current practice of a cardiac surgeon. It will incorporate current guidelines for practice (such as from the American Heart Association and European Society of Cardiology) and up-to-date information based on current literature. All the chapters have been written by cardiac surgeons who have recently undertaken their Cardiothoracic Board / Specialty Exit examinations and reviewed by a cardiothoracic examiner of the Royal College of Surgeons of England. Each chapter will be structured to include aetiology, pathophysiology, clinical features, indications for surgery, peri-operative management, surgical options and postoperative care. Possible complications will be discussed and the results of current practice presented. Importantly there will be a section on basic sciences related to the practising cardiac surgeon and a further section on cardiac investigations with many images illustrating the variety of pathologies. Each chapter will also contain important references for further reading and greater depth of knowledge. The data and body of knowledge presented in this book is strictly evidence-based and is relevant to all cardiac surgical trainees, at any stage of their training programme. It will provide interns, residents and specialist registrars the necessary information to carry out their daily duties. Adult cardiologists and cardiothoracic intensive care unit specialists will also find the book useful in terms of the indications and surgical management of these patients, as they are integral to the cardiac surgical process. Another important group is the nursing staff, physiotherapists and other professions allied to medicine, both surgical and cardiological, working with patients with adult cardiac disease either pre-operatively or postoperatively, as it will help to give a detailed understanding of the principles surrounding adult

Book Information

Paperback: 502 pages

Customer Reviews

Narain Moorjani is based at Papworth Hospital, University of Cambridge, UK. Nicola Viola MD is based at Southampton General Hospital, University of Southampton, UK

This is an amazing book. It is the only text I came across that puts all the important information in one place without having to dig around the internet or several textbooks. The book is very well written with a simple question and answer style that also lends itself to reading in small segments as well as concentrated revision. It comprehensively covers the basic sciences, cardiac investigations, cardiopulmonary bypass, cardiac surgical diseases and the post-operative management of these patients. It answers all the questions that are asked in the operating room, on rounds or in an oral examination. Unlike other revision texts, this book has an amazing array of color images, both illustrations and real radiology/cardiology investigations which help to explain the key concepts. Surgical anatomy and technique is clearly demonstrated. The book also has a fantastic collection of all the seminal publications important for contemporary cardiac practice, especially in the coronary artery disease and heart failure chapters. It also includes all the up-to-date American and European guidelines, including the recently published ESC coronary revascularisation recommendations. Although this book does require some baseline knowledge, I would highly recommend it for any medical student or trainee/resident on a cardiothoracic/cardiovascular surgery placement and especially for anyone undertaking cardiothoracic/cardiovascular surgery board examinations. It is well worth the money.

it will be unfair to raise any issue about it its a fantastic publication and i would advise any cardiac surgeon to go through it as information is clear correct and must be known by every surgeon word by word i congratulate the authors for their hard work i just love this handy immensely rich in information that is correct Dr Zulfiqar Haider consultant cardiothoracic surgeon KSA

Excellent review book with great pictures and close to the latest evidence based guidelines. Hopefully an updated version will be released soon with the latest on percutaneous valves, and sutureless valves. Overall a quick read and I like the question based format which I find useful for studying

A must have text for anyone rotating in or planning to become a Cardiac surgeon. Great review. Helps you to think critically and problem based.

It is amazing book

It is a well written and easy to read book for a subject as complex as cardiac surgery. However its only shortcoming is the poor binding. It is hardly four weeks since I bought it but already some pages are becoming loose somewhere in the middle of the book!

Very quick reference for questions needing quick answer. I'm a visual learner so the images & illustrations come in very handy.

I recommend this book to everyone that work in a cardiac unit The drawings are very illustrative. It is essential.
