## Customer Reviews

i read the first in a series of books Dr. Janov has written The Primal Scream back in 1973.I became a pateint in 1974 In his book he describesthe problems facing the human organism and how to correct them. Since then i've experienced the truth of his discovery and have found it to beall of what he describes. This man has discovered a remarkable and wonderous therapy that restores the ailing humans we are back to our caringand loving self we were intended to beEntered therapy at the age of 28 yrs old I am at present 69 yrs old

For those who wants to understand the nature of illnesses and how to heal. Very good book. This is one of the best that I have read.

Janov's book WYGSAHYGWell is a book that contains at least one testimonial that the patient would now retract. I have evidence. It is too full of unscientific jumps of logic. Check out [...] it is explained well there. His assertion that it is only logical to pursue pain to reverse the effects of pain is simplistic. Even if it is true that in the forward direction, trauma causes psychological problems

(true I think, and important), it does not necessarily mean the reverse is obviously true - that to reexperience pain will lead to a joyful existence that resembles the joy of young children. In my experience, the results from primal therapy also shine doubt on Janov's assertions. It is a pity, because so much of the book is valuable and important, for example the emphasis of love, and the criticisms of robotically extinguishing behaviors with behaviorism (not all behaviorism is bad though) are all good. But Janov's theory is taken to the extremes in his books, and by his followers, spoiling the valid points that they make. For example, gentle births and avoiding birth traumas are noble and correct causes. However, claiming that ALL psychological problems may have birth trauma as the underlying cause is pushing it too far. Suggesting reliving birth over and over again will reverse the effects of birth is also getting wacky. (this is found more in Janov's books after 1971). Janov's works have a tendency to draw you in with true and emotional themes, but they take you too far into his single deterministic model, and get you believing in things that are not proven, and actually unlikely. His model of understanding fails in some circumstances (as do all the grand theories), and in some cases evidence exists that contradicts some of the theory (for example modern research on surgery suggested mammals do better WITH pain medication, in the Primal Scream Janov suggested avoiding pain meds wherever possible, something I think he may now disagree with, but has made no formal retraction). I would recommend learning about all the models in psychology to put this work in context, and look at all the recent data in the field 1990 to 2006. Despite Janov's attack on Freud, Primal is a derivative of Freudian work, with some of the similar problems and benefits that come from that model. The worst thing you could do is wrap yourself in a primal blanket, and think psychology's rejection of this work is somehow repressed or a conspiracy. Mainstream psychology would correctly argue that the evidence is mostly case study from a specific skewed population of Janov followers, at a specific time in their optimism and therapy cycle. Similar miraculous reports are found in spiritual healing practices, again with believer's testimony being emphasised and published when it is positive. In addition, remember this work was written a long time ago, and the diatribe against other psychological treatments is out of date (and in part unfair even at the time). However some of the criticisms of other treatments were valid, and important. Use scientific and critical thinking to make your own decisions about this work. It's not all wrong, if you have your wits about you and you filter the information, it could help fill your life with love and improve the life of your children. Janov is right, love is the most important thing in raising children, and he does a good job of defining love between a parent and child. On the other hand, if you take all of it to heart, and to the extreme, and then go on to destroy all relations with your family, create false memories, and spend decades trying to cry, scream and holding your breath in birth primals, it might just spoil your

life. It could go either way, so think independently for yourself. Consider too, I may be wrong, so look at all the data with a critical eye, and draw on all areas of psychological research for clues.

Nearly 30 years after writing *The Primal Scream*, Janov is still trying valiantly to educate us about neurosis and its cure. In this, his most recent book, he continues to teach us how repressed feelings act as endogenous poison eating away at our thoughts, words and deeds. He also explains that we evolved with an innate healing mechanism that can cure the neurosis resulting from such repression. Unfortunately, Janov's Primal Therapy is no longer so popular, but it remains probably the most well-researched and effective psychotherapeutic modality in history. Read this and every out-of-print book of Janov's you can get your hands on if you're interested in a natural alternative to the prescription drug addiction that currently passes for effective treatment of mental illness.

Arthur Janov's book is well written, convincing and logical although if you have read his other books from 'Primal Scream' onwards the message is very much the same: that feeling can make life easier & longer. The message is also a rather lone one though after so many years; I would like to see other books on the subject by other authors
