Customer Reviews

I bought this book as used, paid \$22 including 2-days shipping. It came this morning, on-time! First time I saw this book was from our local library, I read a couple of pages and I'm telling you it's worth it! Every nurse or medical practitioner should own one of this especially students. I know cause I'm a nurse, and for someone like me who haven't practice nursing for quite sometime, this book really help me refresh my knowledge on various disease. Not only that, it added more information, too. It's not only your basic Pathophysiology, it also walks you through how medications and surgical procedure can stop the progress of the disease. When my husband saw this, he ask me how much I bought it for and when he found out, he said its really affordable and still looks brand new! The

pages aren't torn and they're really smooth. I'm VERY SATISFIED of this product.(wife of the account owner)

This was awesome to have during nursing school, it has the major diseases at a glance - not the specific ones. But it was like 2 bucks used so definitely worth the purchase

good book

Great pathophys book, very helpful, I wish I had it when I took Anatomy and Physiology. Great resource during my med surg rotation in nursing school.

Great resource. Makes careplans a little more manageable.

This is a great pathophysiology review book. Especially wonderful is that the signs and symptoms are not simply listed, but a reason is given as to why that sign or symptom may be happening. Short and to the point and filled with useful information! Love It!
