# HDR Masterclass: High Dynamic Range Made Easy

## Synopsis

This is the full HDR shooting and retouching workflow. First show you will learn how to set up your camera for HDR, then you'll walk through a full HDR photoshoot; showing you framing, setup and shooting 3 exposures. You will then learn the detailed workflow to retouch HDR in Lightroom, Photomatix and Photoshop (including digital blending). With this you will get access to all raw files used to follow every lesson.

## Customer Reviews

My husband and I were fortunate to meet Serge Ramelli on his first ever Paris in Spring PhotoSerge Workshop in 2014. The entire experience was wonderful and memorable. Not only is Serge a talented photographer but an expert in PS and Lightroom. We enjoyed his easy style, humor and graciousness. This HDR book is an essential item to add to our photography arsenal. Thanks Serge and much love from the Waters.

By the master himself Serge....great stuff

Like others here, I have followed Serge's youtube channel for quite some time and have learned an incredible amount about the art of post processing from his informative and easy to understand videos. This book carries on in exactly the same vein as those videos with its simplicity and Serge's unique style of teaching. As ever, Serge will provide you with some RAW files to help you to follow along with the techniques in the book. The book describes a few ways to achieve a natural HDR photograph under different circumstances such as in the golden/blue hours, for interiors, black and white and even from a single RAW file, giving clear instructions with photographs to illustrate the points that are made. Besides this there are many tips and hints that can be used during the processing of pretty much any photo that are invaluable. The book starts with the equipment that you'll need and quickly gets to the heart of the matter; going out and shooting yourself some great HDR photos and processing them (this is the majority of the book's focus, of course). If there is one complaint that can be levied at this excellent learning tool, it is that it only covers Canon and Sony equipment, which is no huge problem at all, as anyone shooting Nikon (like me!) or anything else will get the points being made in the setup chapter as cameras work the same way with little difference between the brands. In summary then, this is an excellent book, which will help newcomers to the world of HDR no end. Old hands at this type of photography could also benefit from its numerous tips from a great teacher like Serge. In case you are unsure of whether to buy it, I would certainly recommend heading to Serge's youtube channel and checking out some of his excellent videos to acquaint yourself with his style of photography and teaching. I am certain that this would help you make up your own mind and inspire your passion for photography at the same time!

Serge Ramelli is a mentor on youtube for many photographers. For years, he has been putting up a video every week that helped photographers improve their craft. Now he has been releasing a book on HDR photography and it's a great one. The way Serge teach photography and post-processing for others make it really easy to follow along and achieve great results by your self. This book is no different. It's a complete book on the art of HDR photography and is all you need on the subject. With an easy-to-understand way of teaching everyone can now master the HDR. If you are a pro there is some tips even for you! I have read many e-books on photography but this one is one of the better ones I've come across.

Serge Ramelli has been a great mentor to me. I have followed all his tutorials and they have taught

me a lot when it comes to retouching in lightroom or photoshop. When I first started photography, I was struggling a lot with landscape photography especially during sunset time, but after watching Serge tutorial, my skills changed drastically. What I like most about Serge is that he is honest and he is straight forward; he tells and shows exactly how to retouch the photo, or which techniques he has used. He does not hide anything, and I think its awesome. He is awesome as a photographer, I love his work. Looking at his gallery is simply mesmerizing.

I have been doing HDR for many years and have read a lot of Ebooks. Serge uses down to earth language and helpful tips for people to get the most out of their photos and the software that they are using to render their HDR photo. This book is useful for all levels of photographers as Serge demonstrates his mastery of Photomatix as well as photoshop. As for myself, I found that the way Serge explains each of the functions allowed me to further understand what I was doing inside of Photomatix and thus, will no doubt improve my HDR photos. The other thing that is great is that he gives a very clear summary at the end of each chapter and I found that really helped in solidifying a lot of the steps. So again, this book is one of the better HDR books out there. It will allow you to make amazing HDR photos and improve your workflow. What more could you really ask for in an ebook?

If you enjoy photography and haven't heard of Serge Ramelli, you need too! Serge "a French photographer living in the beautiful city of Paris" makes tutorials and videos on photography, Lightroom and Photoshop. I have followed him from his early days and can honestly say he has inspired me to create interesting and creative artworks from my previously bland landscapes. This E-book is typically Serge. Informative, instructive and easy to follow in Serges no-nonsense style. He writes as he speaks without deviating off on some tangent like others in his profession and you can also download the Raw files so you can practise as he preaches. The book has much more than just HDR, there are many other tips and treats which apply to all your photos. I highly recommend this book to and wishing to improve their photography and get creative with the Master.

I have been a follower of Mr Ramelli for quite a few years now through his Youtube Channel and this is how I started to learn about photography. I then acquired a Canon Camera which had loads of different options, including the possibility to shoot in RAW and with various exposures. Serge's work has always seemed captivating to me and whilst I liked his style, it make me wonder how he achieved such quality pictures: HDR! I started to play on my own with the camera, trying to replicate

his style. Obviously, this book will help anyone to make proper HDR pictures! That's the key to super-detailed pictures that will wow all your friends! A must-have!
