Customer Reviews

The brilliant pictures will draw your child back over and over again! My aspiring astronaut was mesmerized, she had to read it to me twice. The best thing I can think of is how we both learned new things and how excited she was to learn them. The smile this book brought to her face is proof enough that it absolutely accomplishes what it sets out to do, Entertain your child! The science behind the "why" is easily conceptualized in this series. The smiles and giggles of my daughter while she read this to me proves the rating. Happy children wanting to read is five star in my opinion. And believe me I tried to read just a page and her retort was "no mom I am reading you this book"! No sharing when she is enthralled with the content. Hmmphh I guess I am jealous she got to

read the entire thing. LolWe received this book at a highly reduced and/or for free in return for honest and unbiased review. We pride ourselves in depicting a realistic and honest interaction with the products we review. But the proof is in the pudding so please watch our an edited video when it is available.

This is an excellent ebook for kids! As a teacher of elementary students, I would love to incorporate this ebook into a small group activity where I present a main idea or topic to the whole class and then they break up in small groups and discover more material on their own. My mind was continuously racing as I read through this book thinking of different projects I could make on this topic. It is the perfect age group to let them use a kindle to explore and what a better way to do so than with this ebook! I will totally let other teachers know of this opportunity and will keep this seller in mind with other ebooks available. I received this product free for reviewing purposes, however my opinions are all my own.

When I sat down to read this kindle book between my 3 kids, my oldest who is obsessed with everything science and everything space related was pretty much the only one excited LOL. But once the first picture popped with all the amazing pictures of the planets my almost 5 yr old got immediately on board. Soon after my 3 yr old saw the picture of Neptune (which is purple) she joined in. This book is pretty informative and detailed. On top of the pretty awesome pictures, the descriptions of the planets prompted us to further investigate very interesting facts about Mars and its volcanoes. My kids were out of their chairs and pointing to the computer, talking about which one was their favorite, So interactive it was good to see them all on the same page for once. I REALLY loved this book because even though it is written with children in mind, I as an adult learned from it also... I think that's pretty neat. I feel Baby Professor hit the nail on the head with the right about of balance of descriptive context and stunning pictures. So all in all by the end of the book we were on looking for space decals to decorate their rooms. SmileI received this product at a discount or for free.

Because the images are brilliantly colored, it's easy for kids to choose this book as his/her favorite. have a Kindergartner that is a really big reader. He loves nonfiction books so I thought these 1st grade books would be a great way to get him some quick

science lessons. These books are really short... Like 18 pages short. That is my only complaint. When we were done reading it my son just kind of looked at me like "that's it?" haha. It is a very basic book. The vocabulary is kind of big but it has really great explanations for the words. It might actually be geared more toward the Kindergarten audience. Which actually worked out great for me! The pictures are really great. Some are very simple and others are quite detailed. My son enjoyed looking at them and asking questions and pointing out little things in each one. We are very big fans of ebooks. Just know that this book wouldn't be very good on the paperwhite (black and white version) because this book is in color and it just wouldn't look that great. We have used it on the ipad and the computer and it looks great. I love that I can load a bunch of these types of books up onto my ipad for trips and he has the ability to flip through tons of books without the huge bag of books! Having a big variety of books on hand at all times, especially education books like this are always a plus. I highly recommend you get a wide variety of the books to keep you children entertained!
